Subject: M6H1 – Harvey Response: Collection of Chemical reserves at PWSs
Date: Friday, September 1, 2017 10:50:48 AM

Our phone ops callers are now asking water systems about their chemical reserves and which ones are in short supply. Any shortages will be logged in the Comments of the assessments in Response Manager. I will also request our folks to provide me those shortages to compile to send up. My preference is for someone to generate a report out of RM where someone can review the comments. That is what TCEQ is doing already.

Thanks,

Mark
